## PATENT COOPERATION TREATY

### From the INTERNATIONAL BUREAU

## **PCT**

NOTIFICATION OF TRANSMITTAL OF COPIES OF TRANSLATION OF THE INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (CHAPTER I OR CHAPTER II OF THE PATENT COOPERATION TREATY)

(PCT Rules 44bis, 3(c) and 72.2)

BEIJING GOLDEN-BRIDGE IP AGENCY CO., LTD A 1008 Horizon International Tower No.6 Zhichun Road Haidian District Beijing 100088

	CHINE
Date of mailing (day/month/year) 27 April 2006 (27.04.2006)	
Applicant's or agent's file reference PCT0014	IMPORTANT NOTIFICATION
International application No. PCT/CN2004/000682	International filing date (day/month/year) 24 June 2004 (24.06.2004)
Applicant	IN, Tengchen et al
Transmittal of the translation to the applicant.  The International Bureau transmits herewith a copatentability (Chapter 1).	py of the English translation of the international preliminary report on
	py of the English translation of the international preliminary report on
2. Transmittal of the copy of the translation to the designat	ted or elected Offices.
The International Bureau notifies the applicant that copies Offices requiring such translation:	of that translation have been transmitted to the following designated or elected
EP, KR	
The following designated or elected Offices, having waived translation from the International Bureau only upon their rec	d the requirement for such a transmittal at this time, will receive copies of that quest:
EC, EE, EG, ES, FI, GB, GD, GE, GH, GM, HR, F	R, BW, BY, BZ, CA, CH, CN, CO, CR, CU, CZ, DE, DK, DM, DZ, EA, HU, ID, IL, IN, IS, JP, KE, KG, KP, KZ, LC, LK, LR, LS, LT, LU, LV, MA, , OA, OM, PG, PH, PL, PT, RO, RU, SC, SD, SE, SG, SK, SL, SY, TJ, U, ZA, ZM, ZW
3. Reminder regarding translation into (one of) the official	language(s) of the elected Office(s).
The applicant is reminded that, where a translation of the in must contain a translation of any annexes to the international	nternational application must be furnished to an elected Office, that translation l preliminary report on patentability (Chapter II).
It is the applicant's responsibility to prepare and furn applicable time limit (Rule 74.1). See Volume II of the PC	ish such translation directly to each elected Office concerned within the CT Applicant's Guide for further details.

## - INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/CN2004/000682

Вох	No.	I Basis of the report			
1.	With	regard to the language, this report is based on:		<u> </u>	
	$\boxtimes$	the international application in the language in which it	was filed		
		a translation of the international application into	, w	hich is the language of a	
		translation furnished for the purposes of:			
		international search (Rules 12.3(a) and 23.1(b))			
		publication of the international application (Rule 12.	4(a))	1	
		☐ international preliminary examination (Rules 55.2(a)	and/or 55.3(a))		
2.	Wit	h regard to the elements of the international application, the	nis report is based on (replacement	sheets which have been furnished	
	to th	ie receiving Office in response to an invitation under Artic	le 14 are referred to in this report	as "originally filed" and are not	
	ann	exed to this report):			
		the international application as originally filed/furnished		- 1	
	$\boxtimes$	the description:			
		pages		as originally filed/furnished	
		pages * 1-14	received by this Authority on	11.Jan.2005	
		pages *	received by this Authority on		
j	図	the claims:			
				as originally filed/furnished	
		pages •		th any statement)under Article 19	
		pages * 15-17	received by this Authority on	11.Jan.2005	
		pages	received by this Authority on		
r					
	$\boxtimes$	the drawings:			
		pages 1-9		as originally filed/furnished	
		pages			
		pages •	received by this Authority on	<u> </u>	
		a sequence listing and/or any related table(s) - see Supplet	mental Box Relating to Sequence L	isting.	
3.		The amendments have resulted in the cancellation of:			
		the description, pages		·	
		Classica Mas			
	the drawings, sheets/figs				
]	the sequence listing (specify):				
		any table(s) related to sequence listing (specify):	المسترجين ومستراح مساكر فسندر القسيار والورز ومستدر والمستردون		
4.		This report has been established as if (some of) the amend	ments annexed to this report and lis	sted below had not been made,	
		since they have been considered to go beyond the disclos	sure as filed, as indicated in the Sup	oplemental Box (Rule 70.2(c)).	
		the description, pages			
		T 4 1 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2			
i.		D 11 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1			
	any table(s) related to sequence listing (specify):				
	* If item 4 applies, some or all of those sheets may be marked "superseded."				

## \* INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/CN2004/000682

Inventive step (IS)  Claims  Claims  Inventive step (IS)  Claims  Claims  Industrial applicability (IA)  Claims  Claims  Industrial applicability (IA)  Claims  Industrial applicability  In	Statement:			
Inventive step (IS)  Claims  Claims  1-19  YES  NO  Industrial applicability (IA)  Claims  1-19  YES  Claims  NO  Citations and explanations (Rule 70.7)  D1;P,A,9-61547  D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillacticuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation frequency and outputs rainfall signals.  Novelty  It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under Article 33(2).  Inventiveness  D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuits teep under PCT Article 33(3);  Industrial applicability  Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use	Novelty (N)	Claims	1-19	YES
Inventive step (IS)  Claims  Claims  Claims  Claims  Claims  Claims  Claims  L-19  YES  NO  Claims  L-19  YES  Claims  NO  Citations and explanations (Rule 70.7)  D1:JP,A,9-61547  D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillacircuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillacircuit. Thus the detecting circuit detects the change of the oscillation frequency and outputs rainfall signals.  Novelty  It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under Article 33(2).  Inventiveness  D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit disclosed in D1 hasn't above functions. Claims 1-19 are not obvious to a person skilled on the basis of D1, thus they be inventive step under PCT Article 33(3);  Industrial applicability  Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use		Claims		NO
Claims 1-19 YES  Claims 1-19 YES  Claims NO  Citations and explanations (Rule 70.7)  D1:JP,A,9-61547  D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surfact detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillacircuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation frequency and outputs rainfall signals.  Novelty  It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under 1 Article 33(2).  Inventiveness  D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuits step under PCT Article 33(3);  Industrial applicability  Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use				
Industrial applicability (IA)  Claims  Claims  Claims  Claims  Claims  NO  Citations and explanations (Rule 70.7)  D1:JP,A,9-61547  D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillacircuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation frequency and outputs rainfall signals.  Novelty  It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under Article 33(2).  Inventiveness  D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit disclosed in D1 hasn't above functions. Claims 1-19 are not obvious to a person skilled on the basis of D1, thus they I inventive step under PCT Article 33(3);  Industrial applicability  Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use	Inventive step (IS)	Claims	1-19	YES
Claims NO  Citations and explanations (Rule 70.7) D1:JP,A,9-61547 D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillation circuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation frequency and outputs rainfall signals.  Novelty It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under Article 33(2).  Inventiveness D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit disclosed in D1 hasn't above functions. Claims 1-19 are not obvious to a person skilled on the basis of D1, thus they linventive step under PCT Article 33(3);  Industrial applicability Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use		Claims		_ NO
Claims NO  Citations and explanations (Rule 70.7) D1:JP,A,9-61547 D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillation circuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation frequency and outputs rainfall signals.  Novelty It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under 1 Article 33(2).  Inventiveness D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit disclosed in D1 hasn't above functions. Claims 1-19 are not obvious to a person skilled on the basis of D1, thus they I inventive step under PCT Article 33(3);  Industrial applicability Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use	Inducated continue Office (TA)			
Citations and explanations (Rule 70.7) D1:JP,A,9-61547 D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillation circuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation frequency and outputs rainfall signals.  Novelty It is obvious that not all the technical features of claims 1-19 are disclosed by D1, thus claims 1-19 have novelty under Article 33(2).  Inventiveness D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit is same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit is step under PCT Article 33(3);  Industrial applicability Claims 1-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use	industrial applicability (IA)		1-19	
D1:JP,A,9-61547  D1 discloses a rain sensor, a pair of comb-shaped electrodes are arranged on the rear surface of the detected surface detects rain drop by the change of the capacitance between both electrodes. Detecting circuit is provided with a CR oscillation circuit, it converts the change of capacitance between the electrodes into the change of the oscillation frequency of the oscillation circuit. Thus the detecting circuit detects the change of the oscillation frequency and outputs rainfall signals.  Novelty  It is obvious that not all the technical features of claims I-19 are disclosed by D1, thus claims I-19 have novelty under Article 33(2).  Inventiveness  D1 is the closest prior art. The detecting circuit disclosed in D1 is differ from the detecting circuit in the invention detecting circuit in the invention not only can detect rain or fog, but also can control the operation of corresponding devices the same time, the invention has a close loop control system, which can control the work effects of devices. The detecting circuit disclosed in D1 hasn't above functions. Claims I-19 are not obvious to a person skilled on the basis of D1, thus they be inventive step under PCT Article 33(3);  Industrial applicability  Claims I-19 have industrial applicability under PCT Article 33(4), because the device claimed can be made or use		Claims		NO
	Novelty  It is obvious that not all the te Article 33(2).  Inventiveness  D1 is the closest prior art. To detecting circuit in the invention has a disclosed in D1 hasn't above fund	clinical features the detecting cit of only can detections. Claims	se of the oscillation frequency and outputs rainfall signals.  s of claims 1-19 are disclosed by D1, thus claims 1-19 have nove reuit disclosed in D1 is differ from the detecting circuit in the set rain or fog, but also can control the operation of corresponding system, which can control the work effects of devices. The de-	invention ing devices tecting ci
	Industrial applicability Claims 1-19 have industrial	applicability ur	nder PCT Article 33(4), because the device claimed can be ma	de or use
